

Hydro Leduc, a complete range of piston pumps for truck hydraulics

- Fixed displacement in-line piston pumps, single and twin-flow;
- Fixed displacement "bent axis" design pumps;
- Variable displacement pumps with load sensing control.

Additional bore on the shaft available on request (hole Ø-8.15).

HYDRO LEDUC, specialist in high pressure hydraulic components, has designed these three ranges of pumps to specifically meet the needs of the truck-mounted hydraulic equipment market.

- **Endurance**
- **Silence**
- **Adaptability**

PA and PAC pumps

X pump

TXV variable displacement pumps :
Add some intelligence to your hydraulic circuits !

Why use a variable displacement pump-?

- to obtain great precision of the movements to be made ;
- to be able to make various movements simultaneously ;
- to do the above :
 - quietly ;
 - without vibrations ;
 - without heating up the hydraulic circuit ;
 - and using much less diesel fuel.
